

Twenty searches that reach a card

Each of these reached a card when the content set was last checked, and each reaches a different topic. Use them if your own searches return nothing, and keep one that surprises you.

	SEARCH	TOPIC IT REACHED
1	can search results change how people vote	The search engine manipulation effect
2	is google biased how would anyone know	Algorithmic bias and how audits find it
3	who regulates google in the uk	Who governs search
4	right to be forgotten	The right to be forgotten
5	is google safe for a 7 year old	Children and search
6	how can I tell that a result is an ad	Advertising and sponsored results
7	why does alexa only give one answer	Voice assistants and the single spoken answer
8	how do blind people use google	Accessibility of search
9	who labels the data that trains ai	Training data and the open web
10	y am i trapped doomscrolling	The attention economy and engagement ranking
11	how do i check if a website is trustworthy	Search literacy
12	why are search results worse in welsh	Language inequality in search
13	why do cookie popups make rejecting harder	Cookies and consent
14	is chatgpt reliable for medical advice	Asking a chatbot instead of searching
15	trending films	Trending and what counts as trending
16	why does google add animations to certain searches	How results are ranked
17	why do image results all look american	Whose world the results represent
18	youtube	Recommendation systems
19	are my results keeping me trapped in a feedback loop	Personalisation and why your results differ
20	what does my phone track about me all day	Ad tracking and what you reveal by searching

Watch whether the register changes as the topics do.

Twenty topics are represented here. As you read each card, ask which of the four categories it belongs to: Mechanism, Critical question, Things to watch out for, or Activity. Then ask what a different category would have offered this reader instead.

If a query returns nothing, write it down.

These were checked against an offline copy of the content on 5 September 2026, at the 0.35 matching threshold. The live extension carries slightly different card text, and matching can move. A query that worked in September and does not work today is a finding about the tool, not a mistake by you.
